AMINITRO-N25 is a liquid fertilizer rich in nitrogen with trace elements and with amino acids, recommended as a complement to basal dressing and in fertigation, indicated in the prevention and control of deficiencies or imbalances in the assimilation of nitrogen.

It favors the vegetative development and as it contains nitrogen in 3 different forms, the supply, as well fast (Nitric) as prolonged (Ammoniacal and Ureic) is guaranteed.

Its use is recommended in the moments in which crop need more quantity of nitrogen, such as in stages of active growth.

AGRIVA HOLLAND B.V.

AMINITRO-N25

AMINITRO-N25 is recommended in covering fertilization in cereals and in fertigation, distributing the resultant dose of the fertilizer planning in 2 or 3 irrigations.

In fertigation, don't exceed the dose of 1 liter per 100 liters of irrigation water, being the most usual dose of 300-500 cc per 100 liters of water.
