POLIHUM PLUS-QX

**MADE IN
HOLLAND**

POLIHUM PLUS-QX Humus is a product based on humic and fulvic acids resulting from the process of decomposition and transformation of organic matter coming from Leonardite.

It acts increasing the soil microbial activity and the cation-exchange capacity (CEC), thus improving its physicochemical properties, the assimilation of other nutrients needed by the plant and strengthening the clay-humic complex.

Increases the buffering capacity of the soil and allows the formation of complexes with mineral cations improving the absorption of these by the plant.

Specially enriched with NPK, hormones and bacteria. Because of its totally assimilable formula, FERTIORGAN Humus can be applied by root feeding using any kind of irrigation system. Dosage must be adequated to the kind of soil and the crop's phenology. It should be applied several times during the vegetative cycle. General application dosages: 2.5-5 l/ha and application until completing 40-60 l/ha and crop cycle.

AGRIVA HOLLAND B.V.

POLIHUM PLUS-QX

Fruit vegetables	40 – 60 l/ha	4 – 7 applications, since pre-transplant and every 10 – 15 days.
Leaf vegetables	40 – 60 l/ha	4 – 7 applications, since pre-transplant and every 10 – 15 days.
Citrus and subtropical crops	40 – 60 l/ha	In pre-sprouting, pre-blooming and fruit formation, every 15 days.
Fruit trees, olive trees and vines	40 – 60 l/ha	From sprouting, repeat every 15 – 20 days, prebloom and fruit formation.
Extensive and ornamental	25 – 30 l/ha	3 – 5 applications, since transplant and every 15 – 20 days.
