**MADE IN
HOLLAND**

It is a natural, organic product that can be applied without leaves and dripping, which ensures that your plant is strengthened against environmental stress conditions by maintaining the correct balance of amino acids.

Thanks to its low molecular weight, it provides very fast uptake, transport and utilization.

The high content of amino acids increases the plant's resistance to abiotic stress conditions.

Due to the free amino acids and short-chain peptides (Oligo peptides) in its content, it provides the best possible vegetative and generative development of the plant with its chlorophyll synthesis, fertility, enzyme activator and chelating effect.

It provides long-term and stable (permanent) effectiveness due to its long-chain peptides in its content and its permanent effect on the soil.

It increases the internal and external quality of the product and accordingly the fruit quality.

It provides an increase in the amount of marketable products.

With its soil regulating feature, it creates a stronger root structure and enables the plant to benefit from nutrients more effectively.
